LONI 2.0 – Optical, Routers and HPC

Thursday, July 11, 2013

WebEx

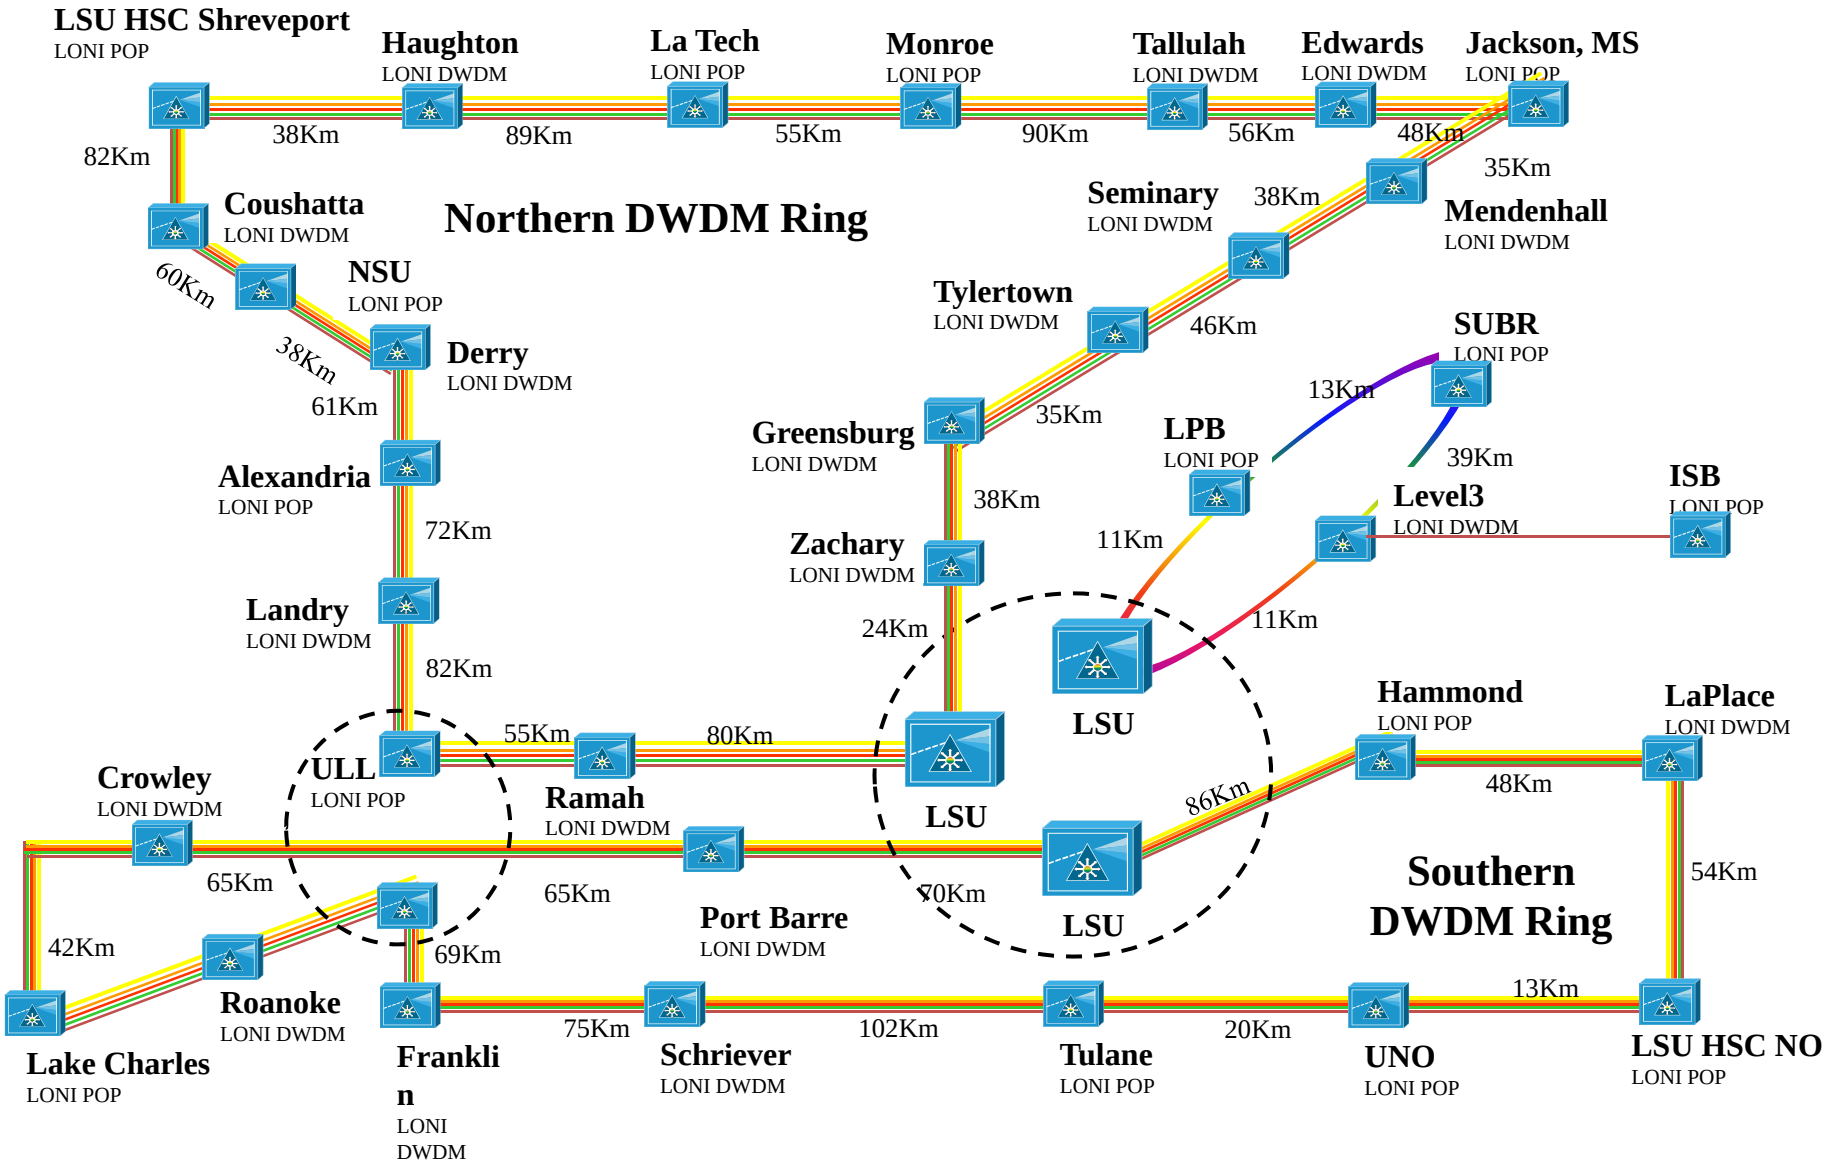
9:00am – 10:00am

Agenda

- Current State
- How did we get here?
- Moving forward
- Campus participation

Current Optical State

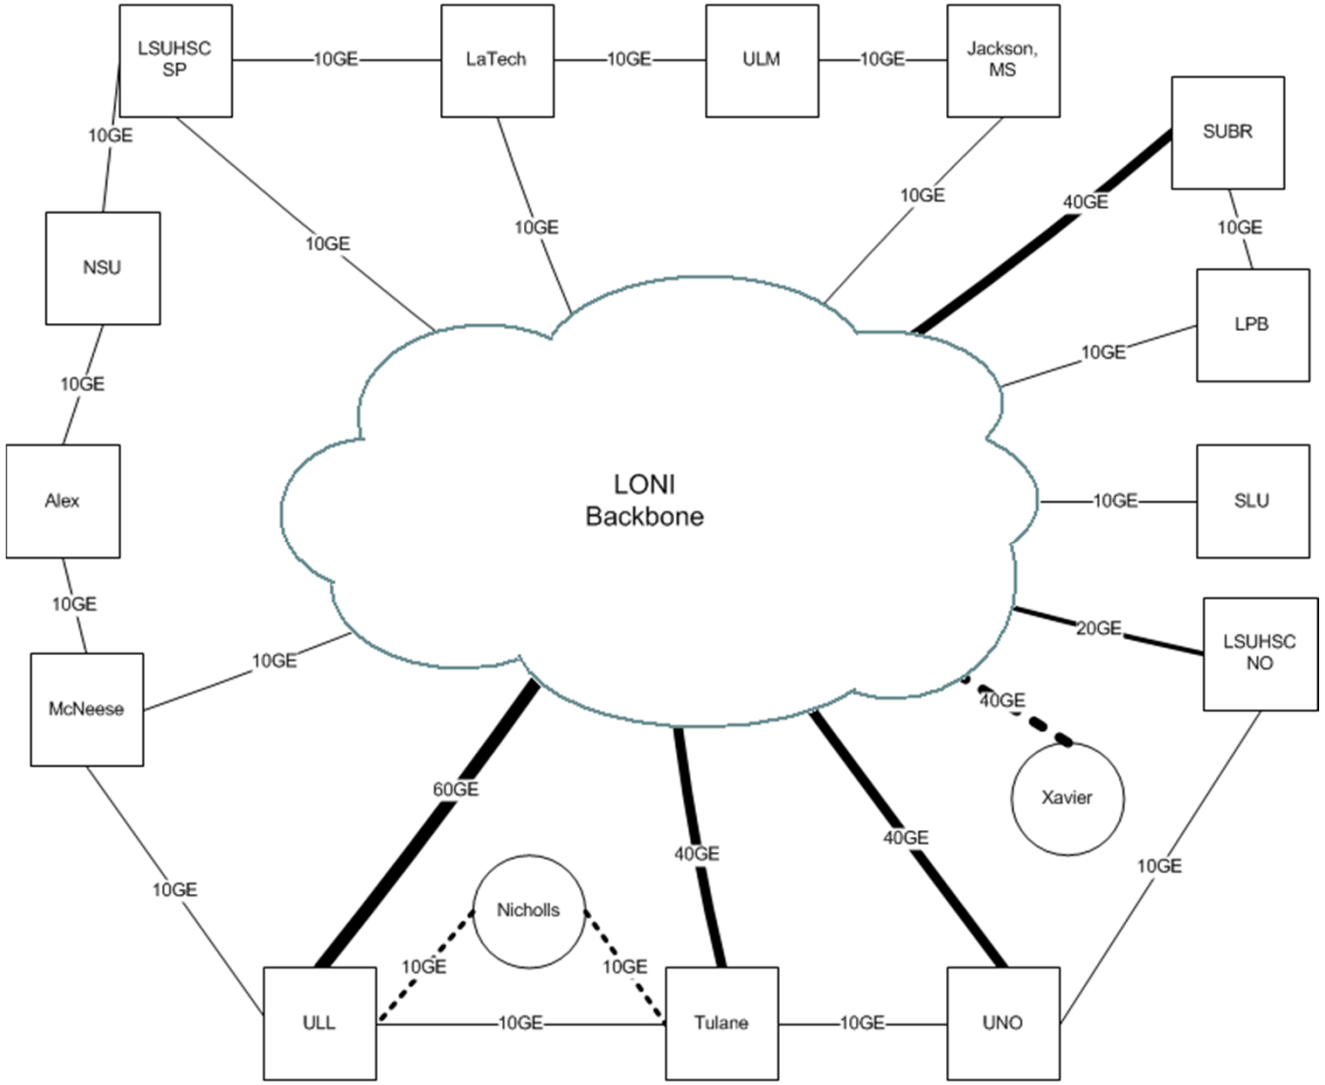
Optical Transport (Layer 0)



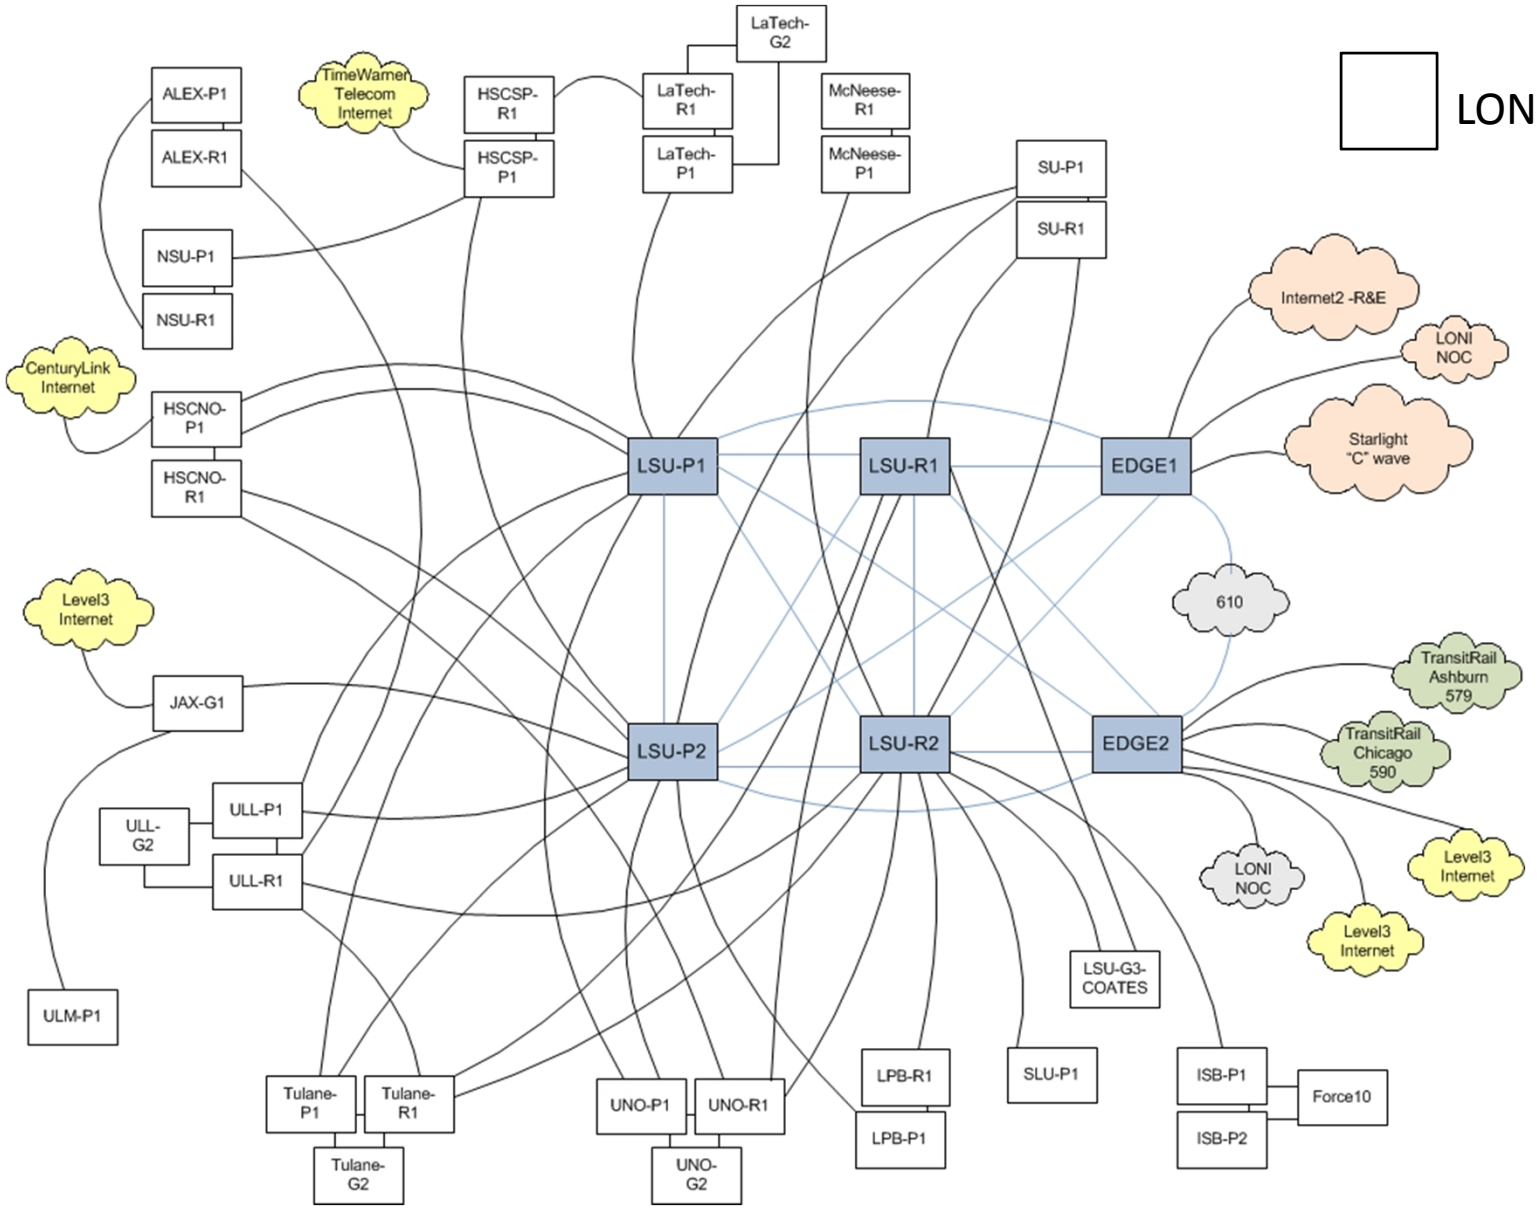
Optical Circuits Layer 1

Campus Device

LONI Device



Current Router State (Layer 2 and Layer 3)



LONI Device
LaTech-G2
TimeWarner Telecom Internet
HSCSP-R1
LaTech-R1

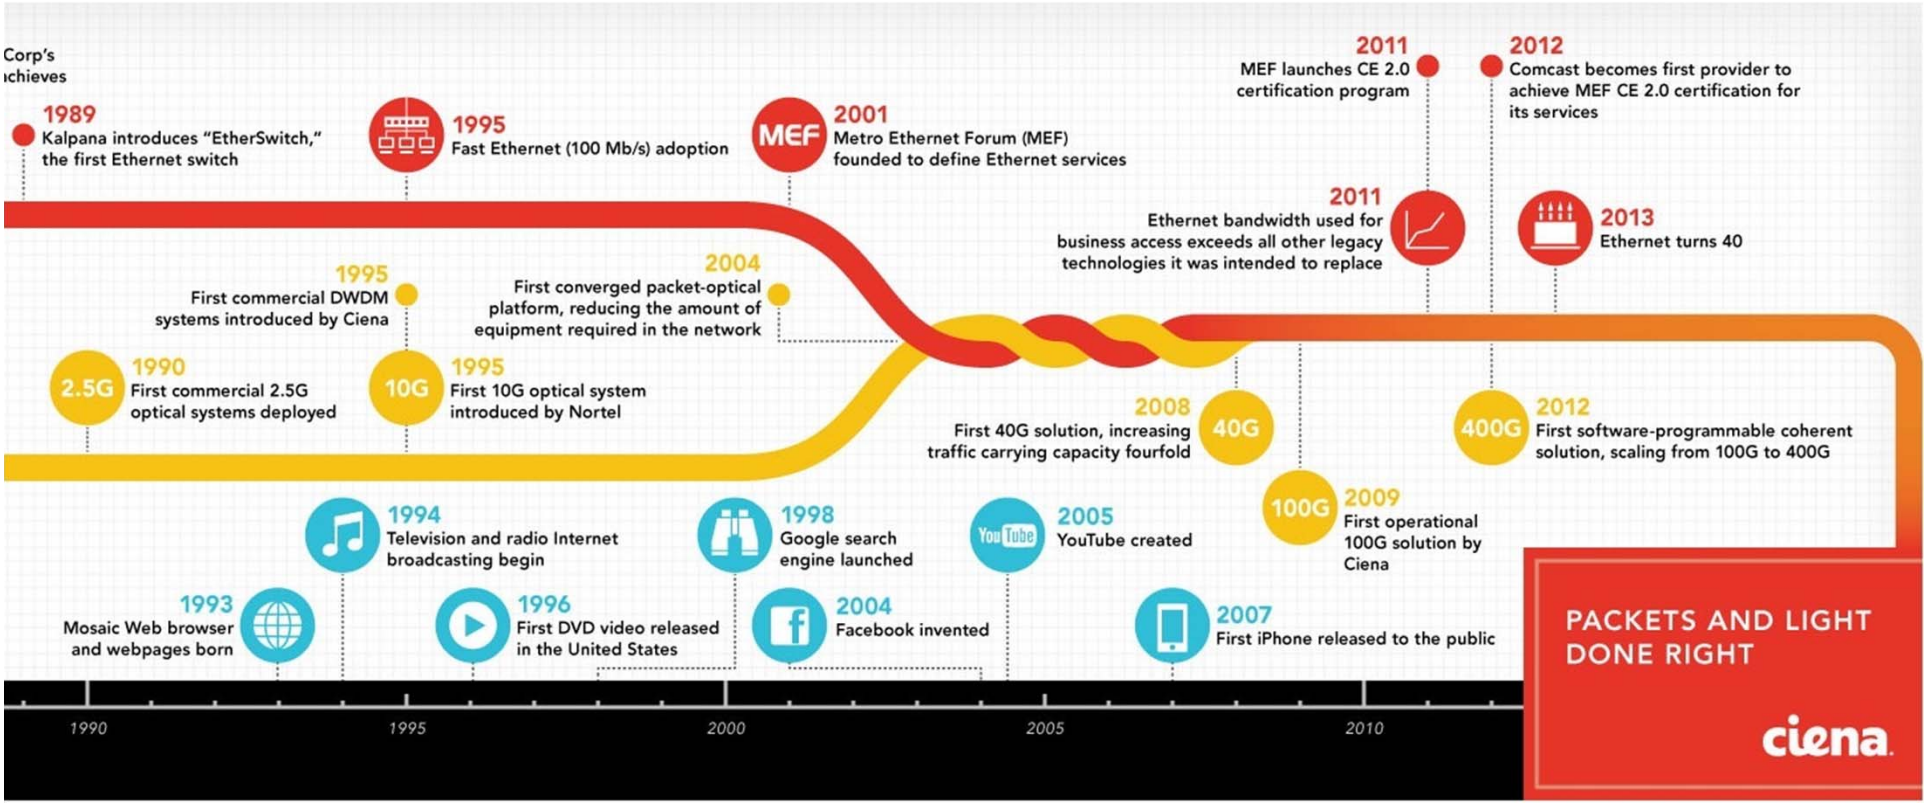
How did we get here?

January 1, 2010

We watched the market and engaged others

What Happens in an **Internet Minute?**

And **Future Growth** is **Staggering**



Corp's
achieves
1989
Kalpana introduces "EtherSwitch," the first Ethernet switch
1995
Fast Ethernet (100 Mb/s) adoption
MEF
2001
Metro Ethernet Forum (MEF) founded to define Ethernet services
2011
MEF launches CE 2.0 certification program
2012
Comcast becomes first provider to achieve MEF CE 2.0 certification for its services
2011
Ethernet bandwidth used for business access exceeds all other legacy technologies it was intended to replace
2013
Ethernet turns 40
1995
First commercial DWDM systems introduced by Ciena
2004
First converged packet-optical platform, reducing the amount of equipment required in the network
2.5G
1990
First commercial 2.5G optical systems deployed
10G
1995
First 10G optical system introduced by Nortel
2008
First 40G solution, increasing traffic carrying capacity fourfold
40G
400G
2012
First software-programmable coherent solution, scaling from 100G to 400G
100G
2009
First operational 100G solution by Ciena
1994
Television and radio Internet broadcasting begin
1998
Google search engine launched
YouTube
2005
YouTube created
1993
Mosaic Web browser and webpages born
1996
First DVD video released in the United States
2004
Facebook invented
2007
First iPhone released to the public
1990
1995
2000
2005
2010
PACKETS AND LIGHT DONE RIGHT
ciena

INFONETICS RESEARCH

100G drives the global revenue growth in the optical transceiver and transponder market

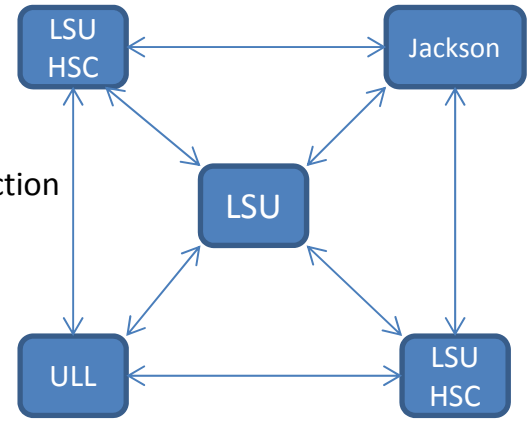
Research Proposals and Activity

- July 1, 2011
  LONI Fiber to Nicholls State University
- May 31, 2012
  NSF CC-NIE Proposal with Tulane
- May 31, 2012
  NSF CC-NIE Proposal with SUBR
- May 31, 2012
  NSF CC-NIE Proposal with LSU
- September 8, 2012
  NSF CC-NIE Award with LSU
- March 13, 2013
  NSF EPSCoR C2 RII Rebudget
- April 1, 2013
  NSF CC-NIE Proposal with LSU
- April 1, 2013
  NSF CC-NIE Proposal with Tulane
- April 1, 2013
  NSF CC-NIE Proposal with SUBR

Moving Forward

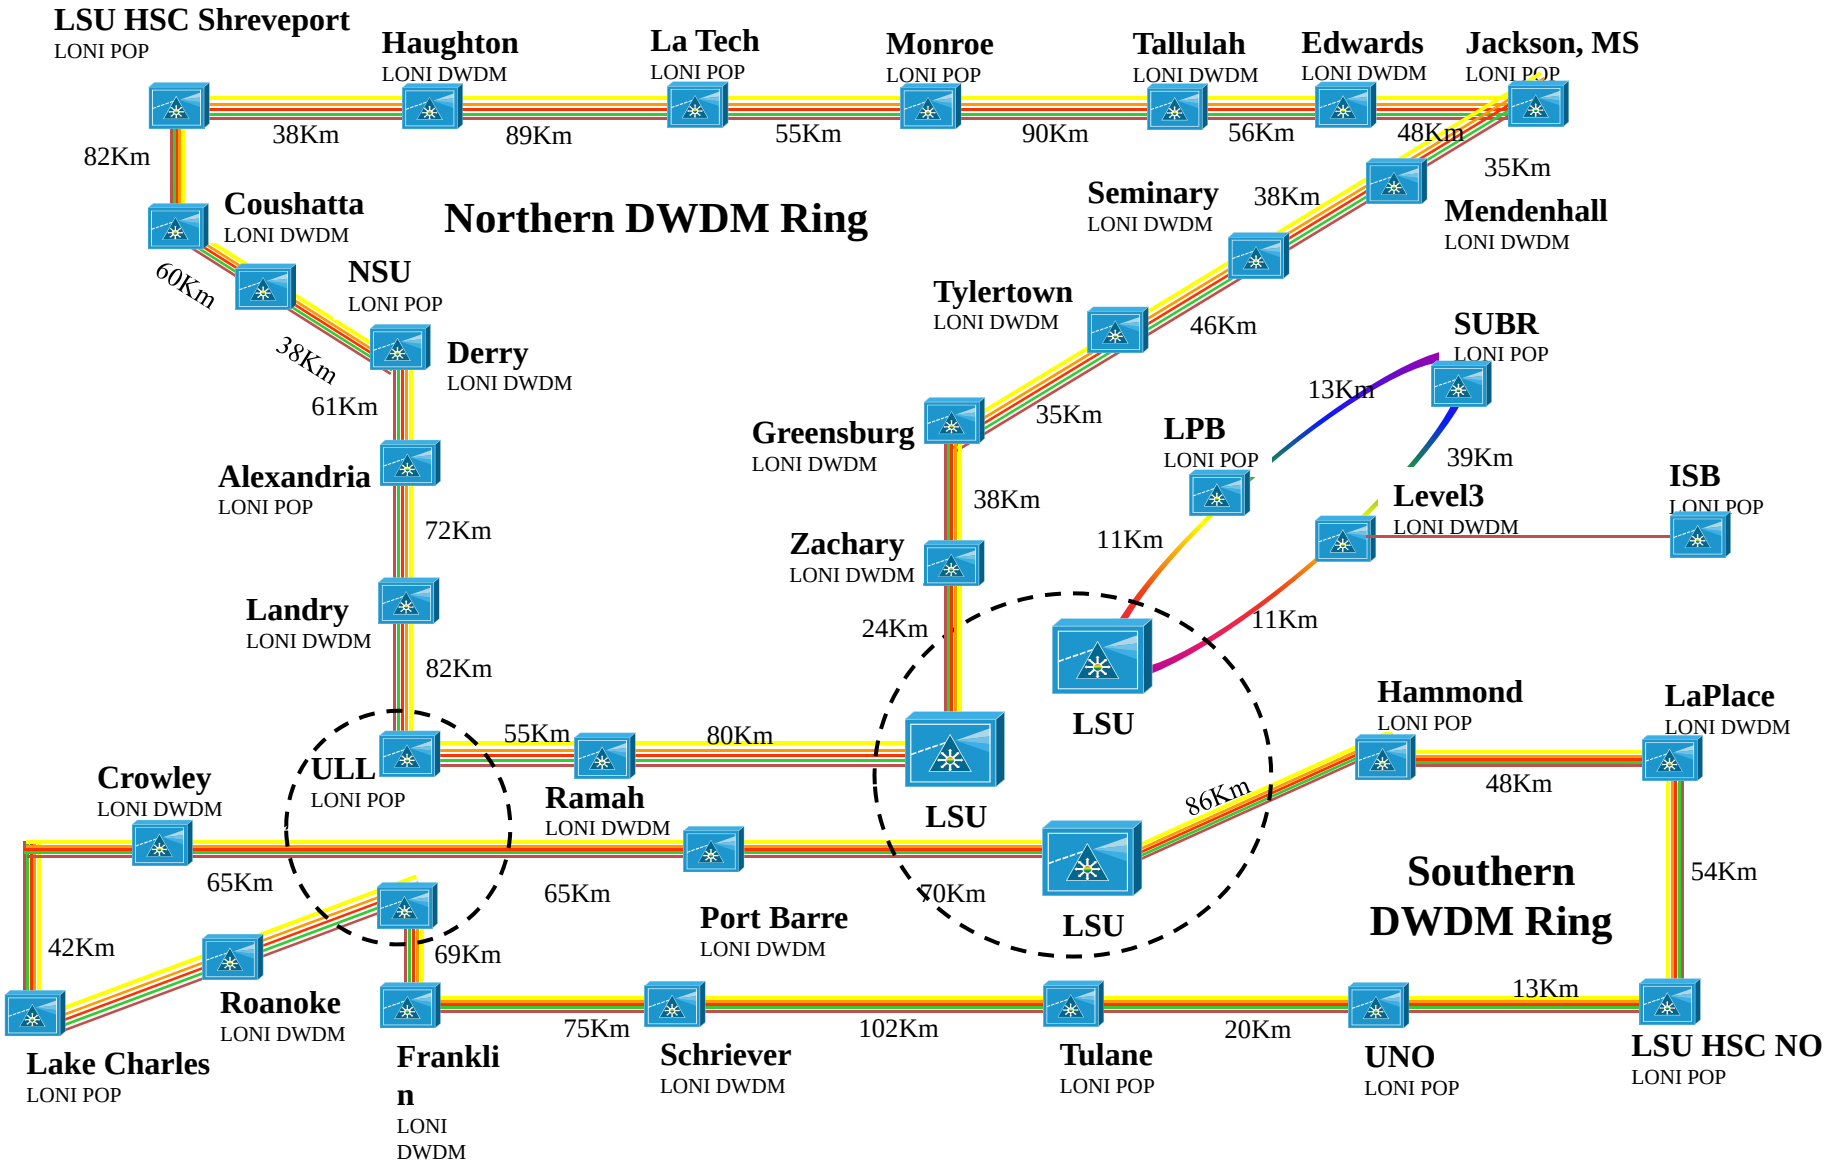
July 18-19, 2011
2011 LONI Technical Forum

- Fewer routers focused at external peerings
- More optical nodes
- Push MPLS down to optical nodes
- Provide managed CPE device that is MPLS configurable on every connection
- Move from optical rings to optical mesh
- Upgrade router backbone to 40GE
- Every connection supporting IPv6
- Network management via IPv6



LONI 2.0 – Optical
(Layer 0 and Layer 1)

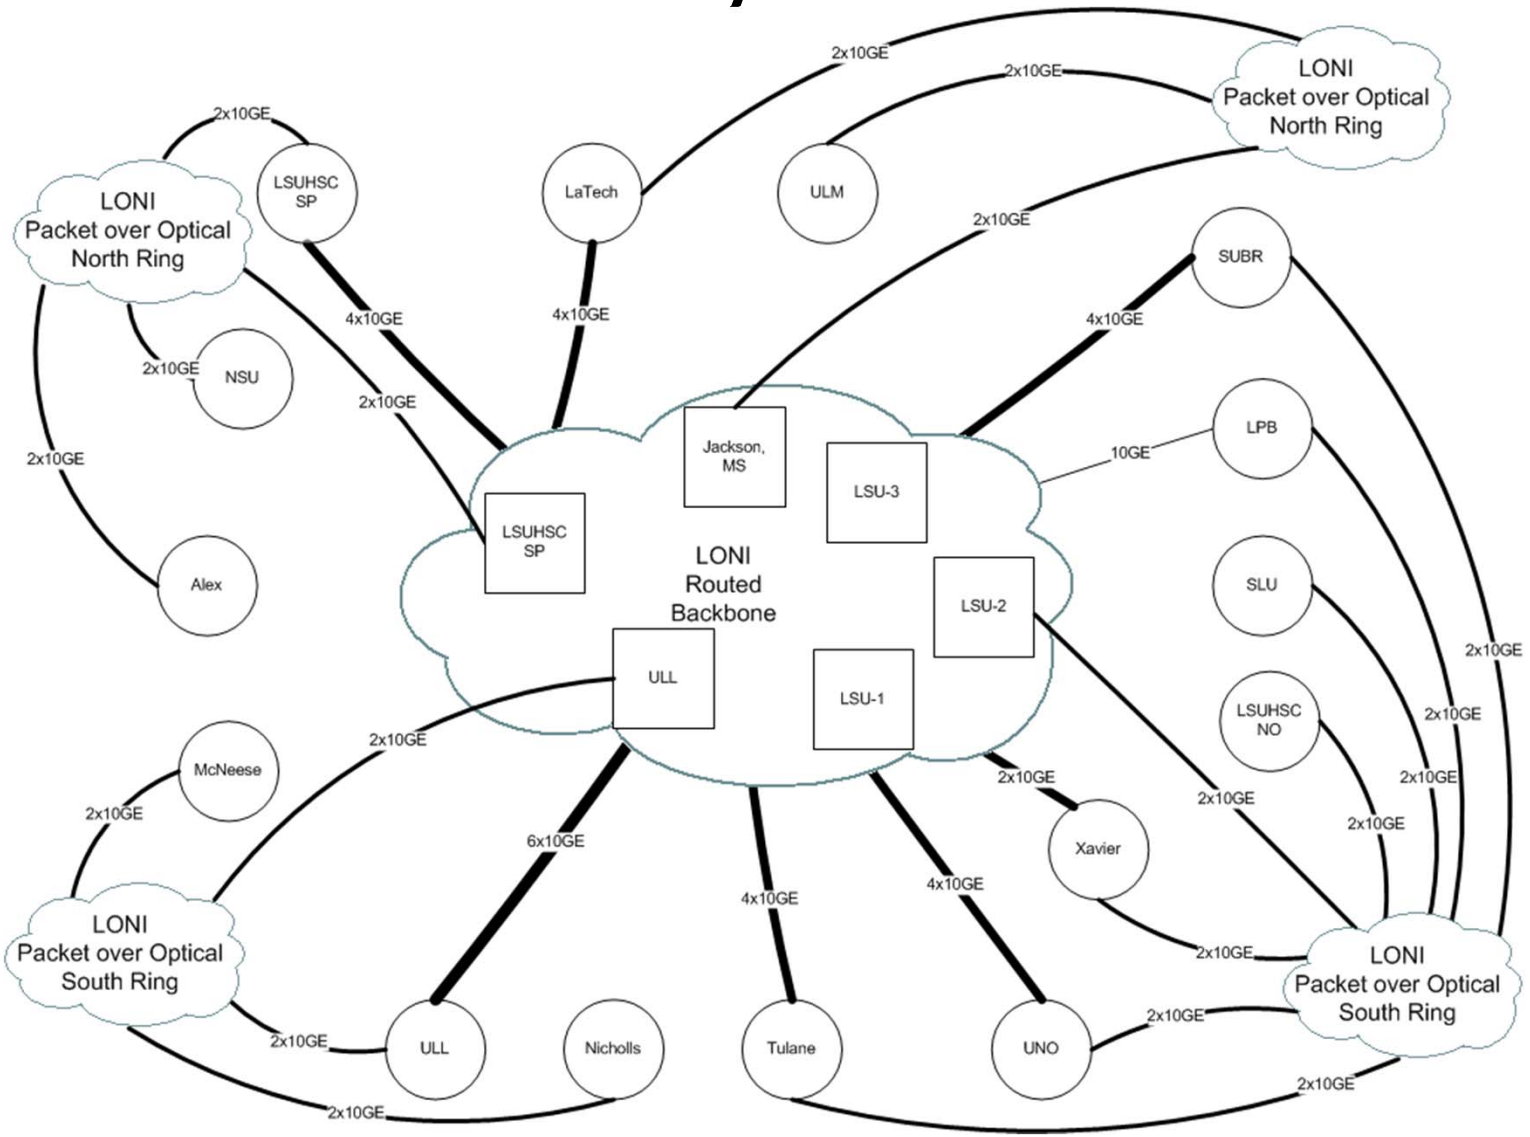
Optical Transport (Layer 0) –NO CHANGE



Optical Circuits
Layer 1

Campus Device

LONI Device



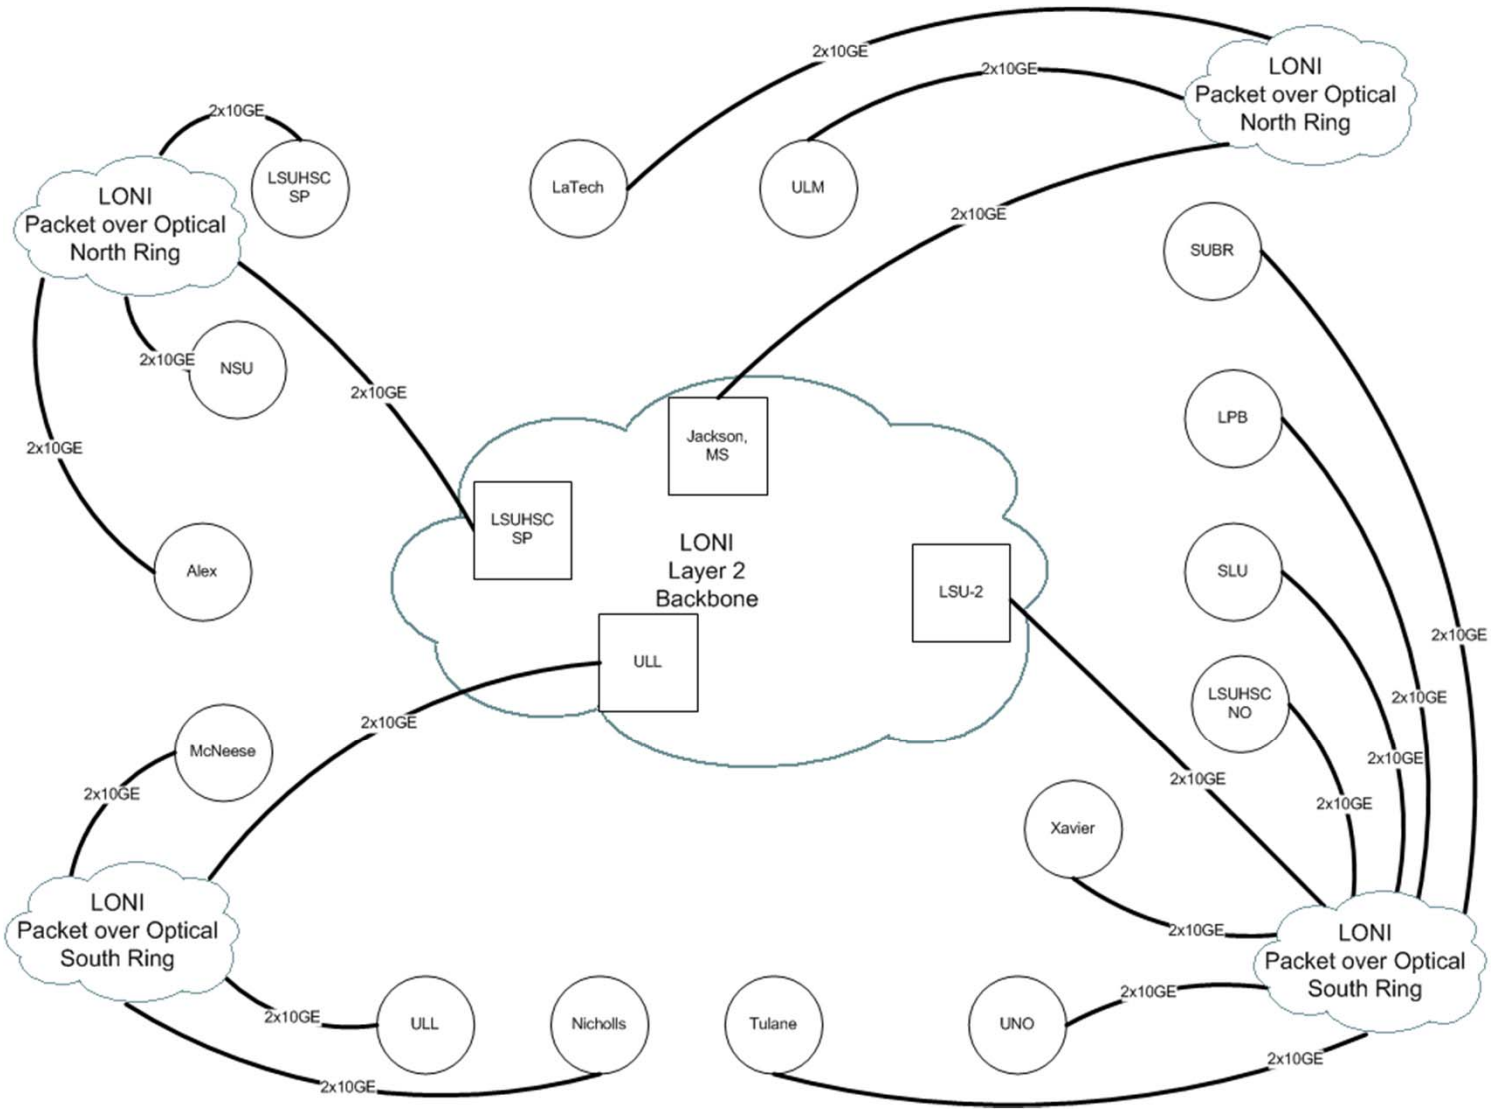
Push MPLS down to optical nodes

select optical platform with native Ethernet capability

MPLS/Ethernet Layer 2

Campus Device

LONI Device

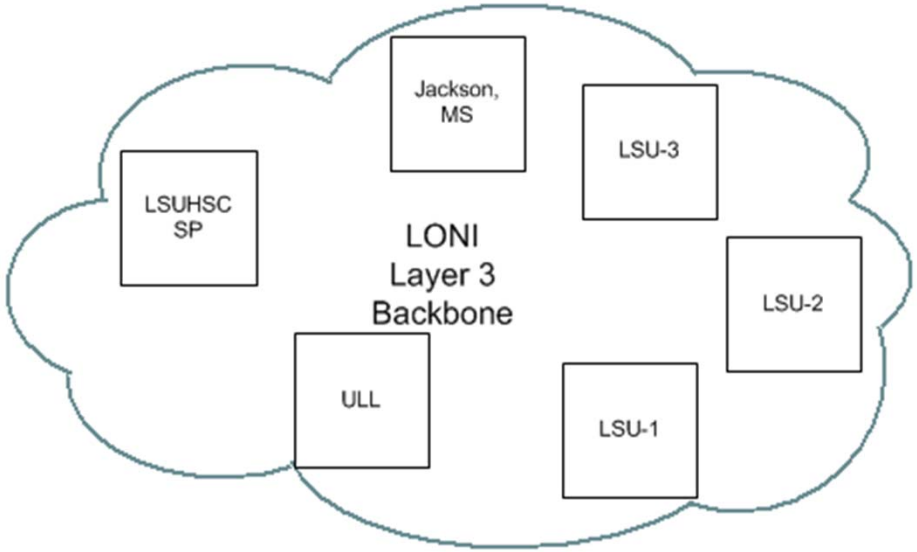


Fewer Routers

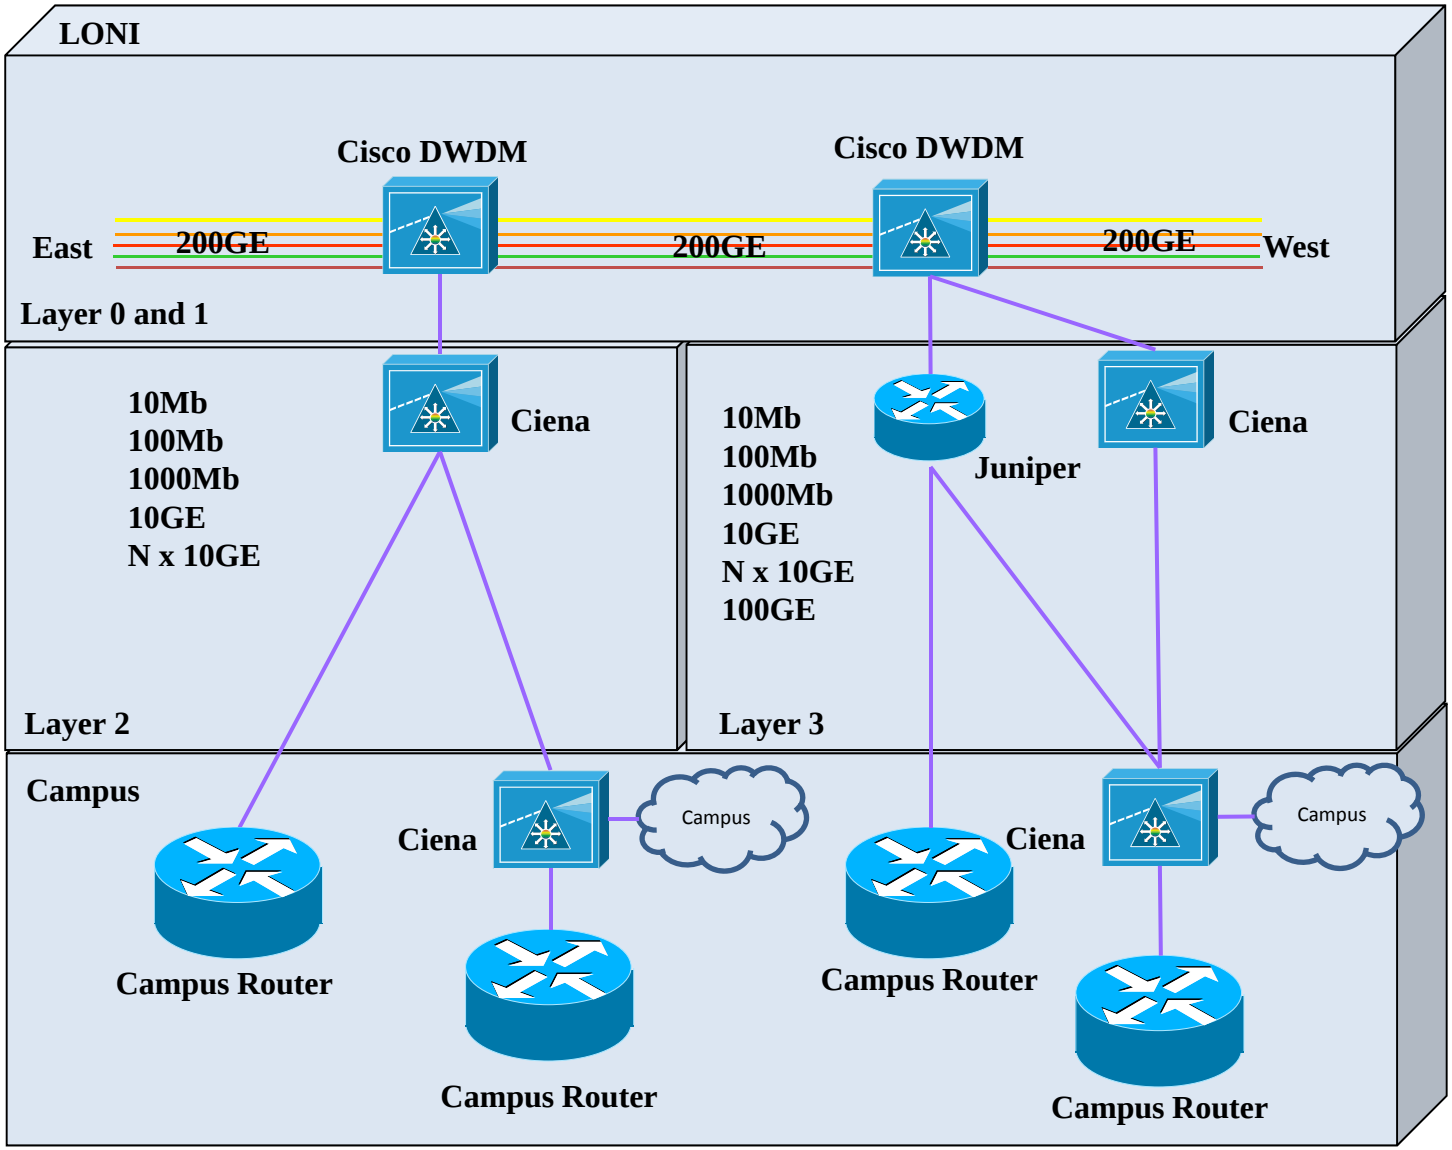
6 core routers

Layer 3

LONI Device

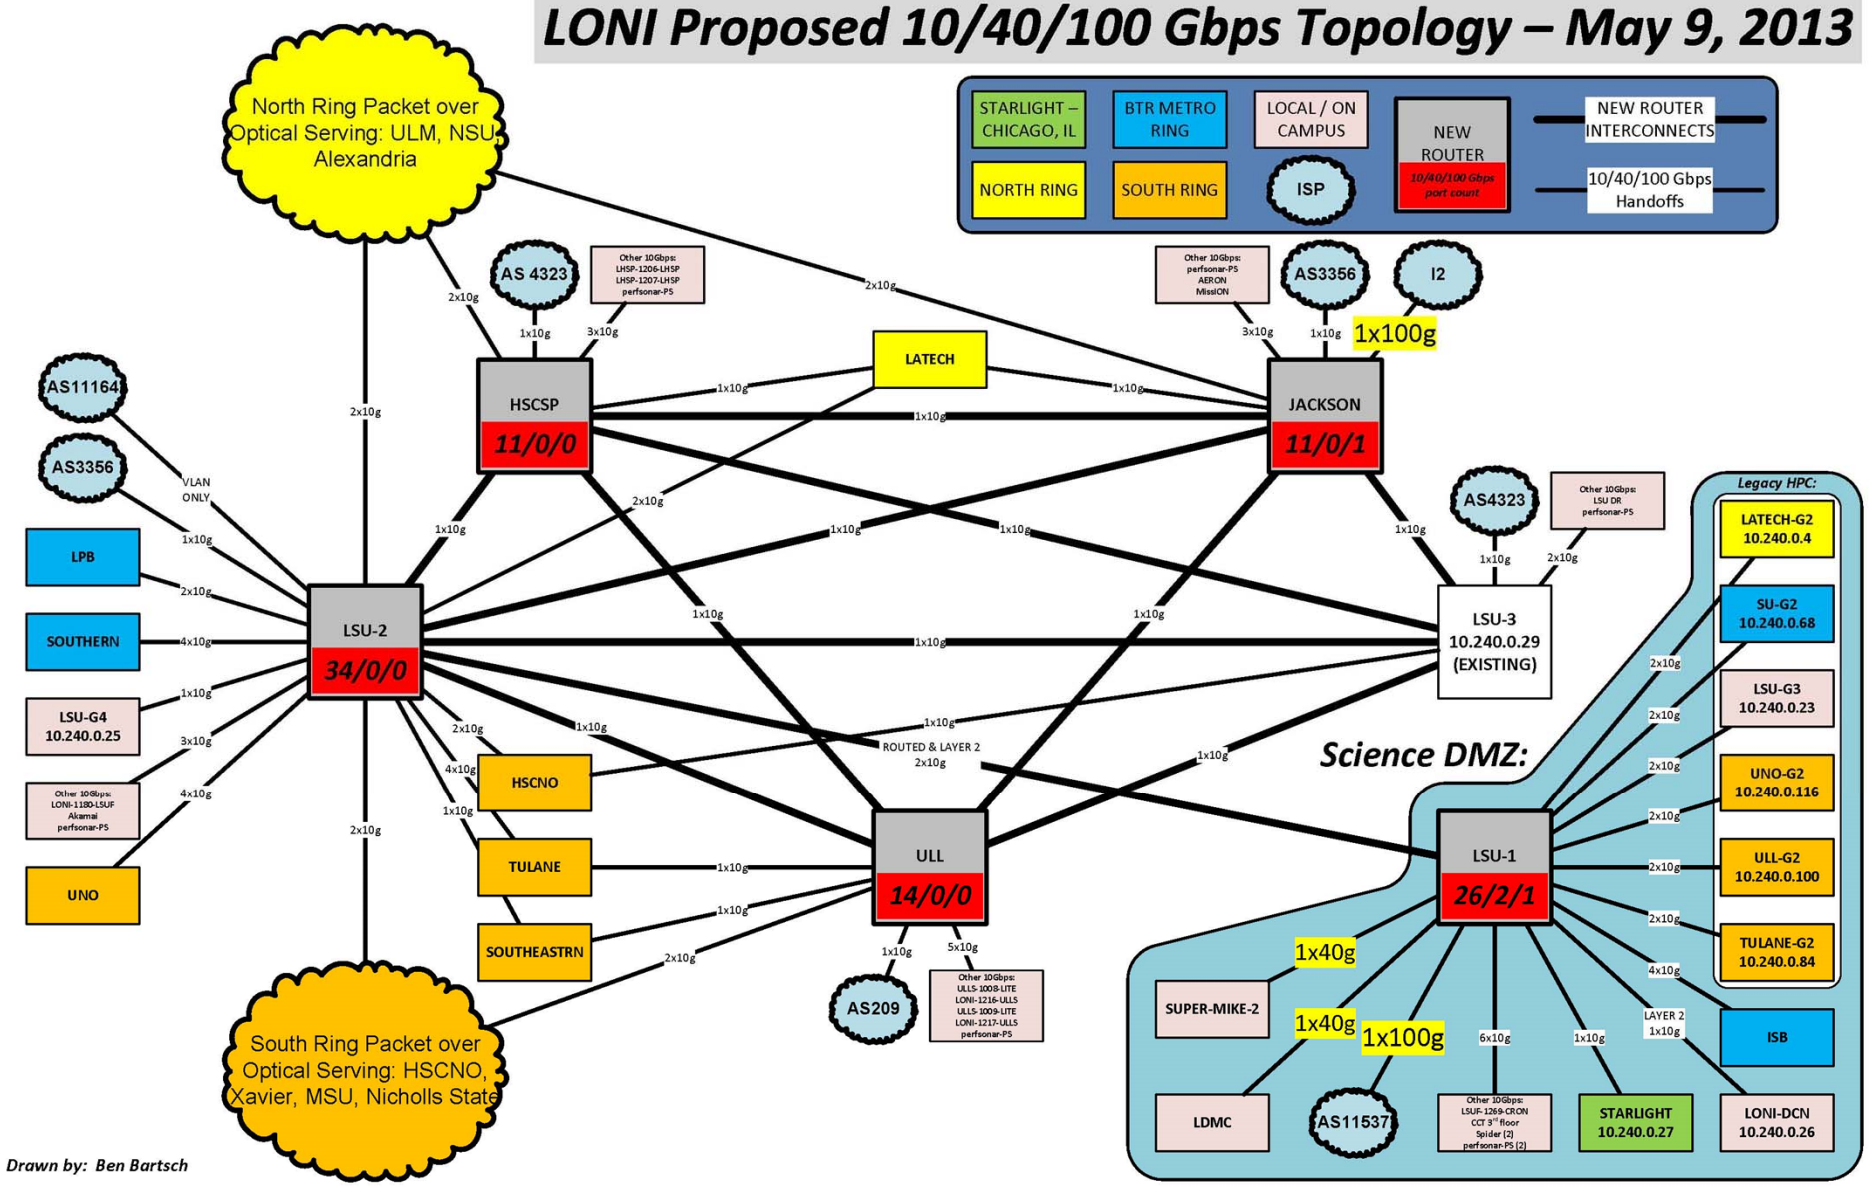


Building Blocks



Only 10Gbps and higher offered to directly connected campus

LONI Proposed 10/40/100 Gbps Topology – May 9, 2013

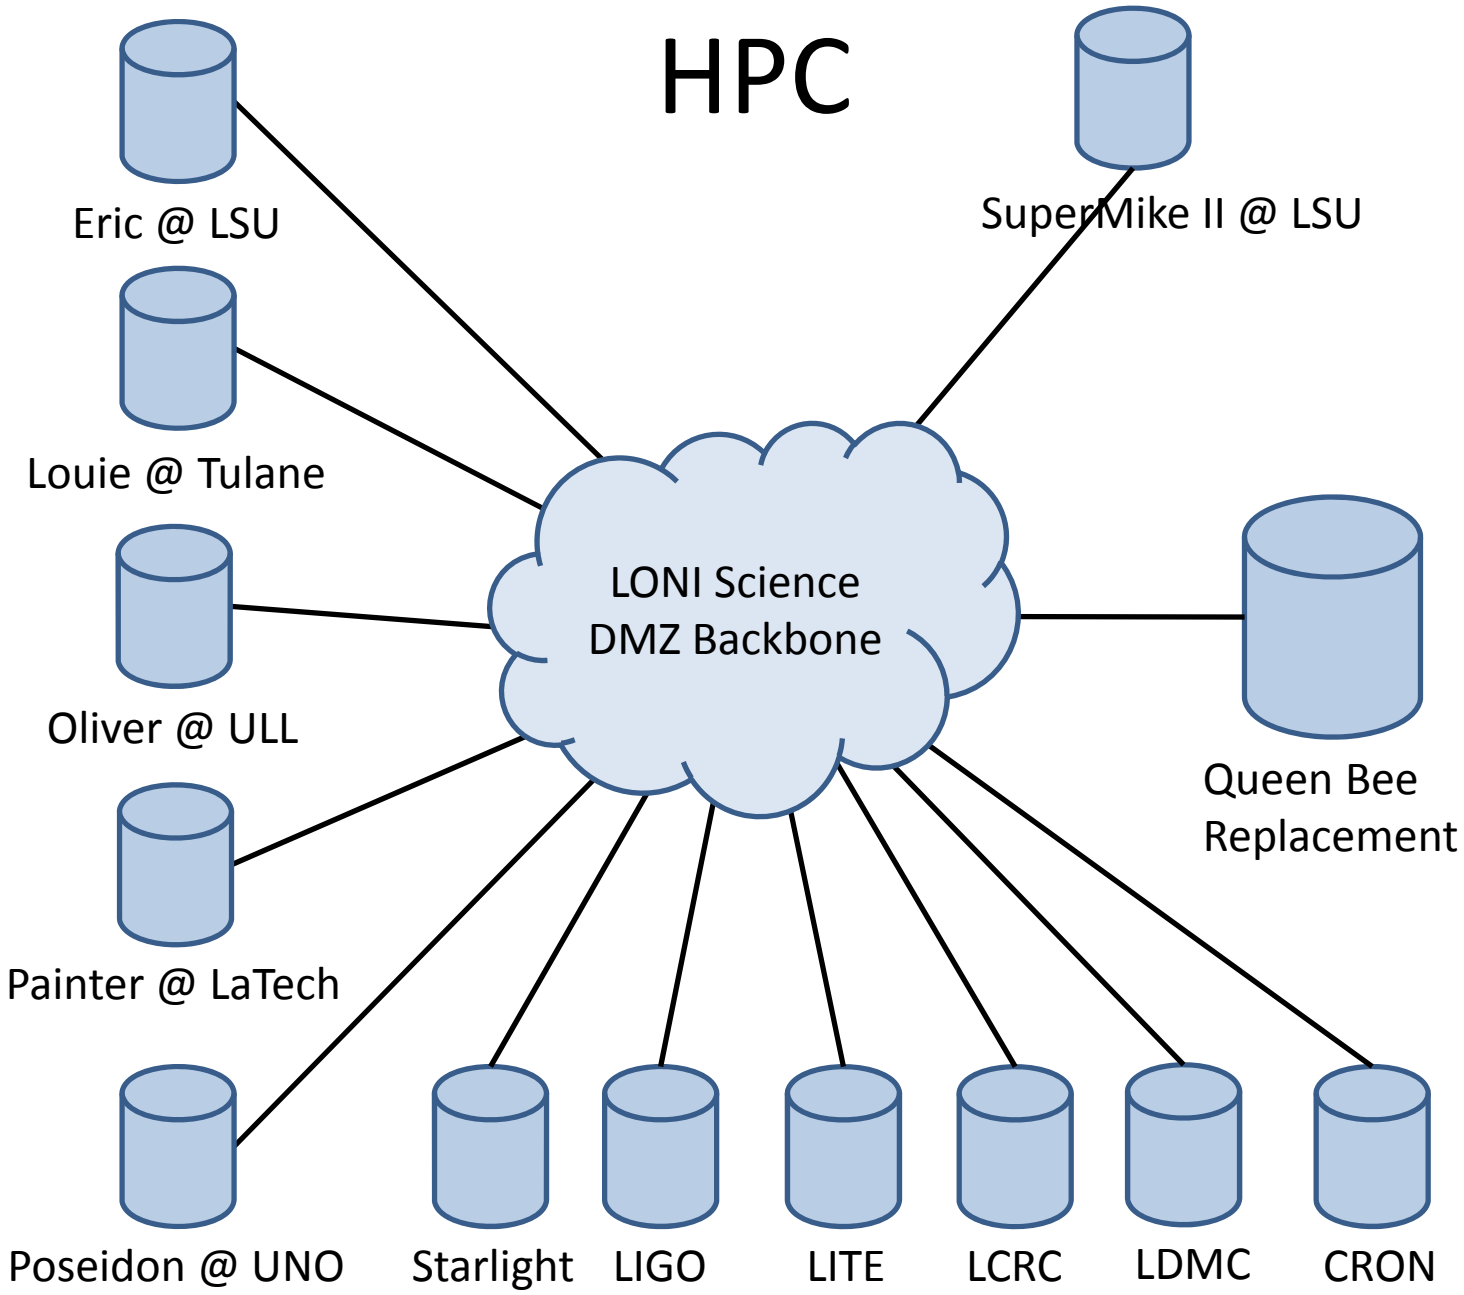


Backbone Campus Participation

- Investment
- N x 10Gbps
- 100Gbps
- Discussion and Feedback

WAN Campus Participation

- Investment
- 10/100/1000Mbps
- Discussion and Feedback



HPC
